Hide the door in the wall

Doors on hidden frames are a subtle finishing touch to interiors. They can be a discreet passage hidden in the wall or, on the contrary, attract attention with an interesting finish.

Doors with a hidden frame can be used in all models from the INTER DOOR range.

Dimensions

You can order concealed doors up to 3 meters high. If you use a so-called door frame without a top beam, they can reach the ceiling.

Finishes

Choose from natural veneers, matte finishes from the DI MODA collection or those with wood grain, high-gloss finishes from the GLOSSA collection or durable HPL.

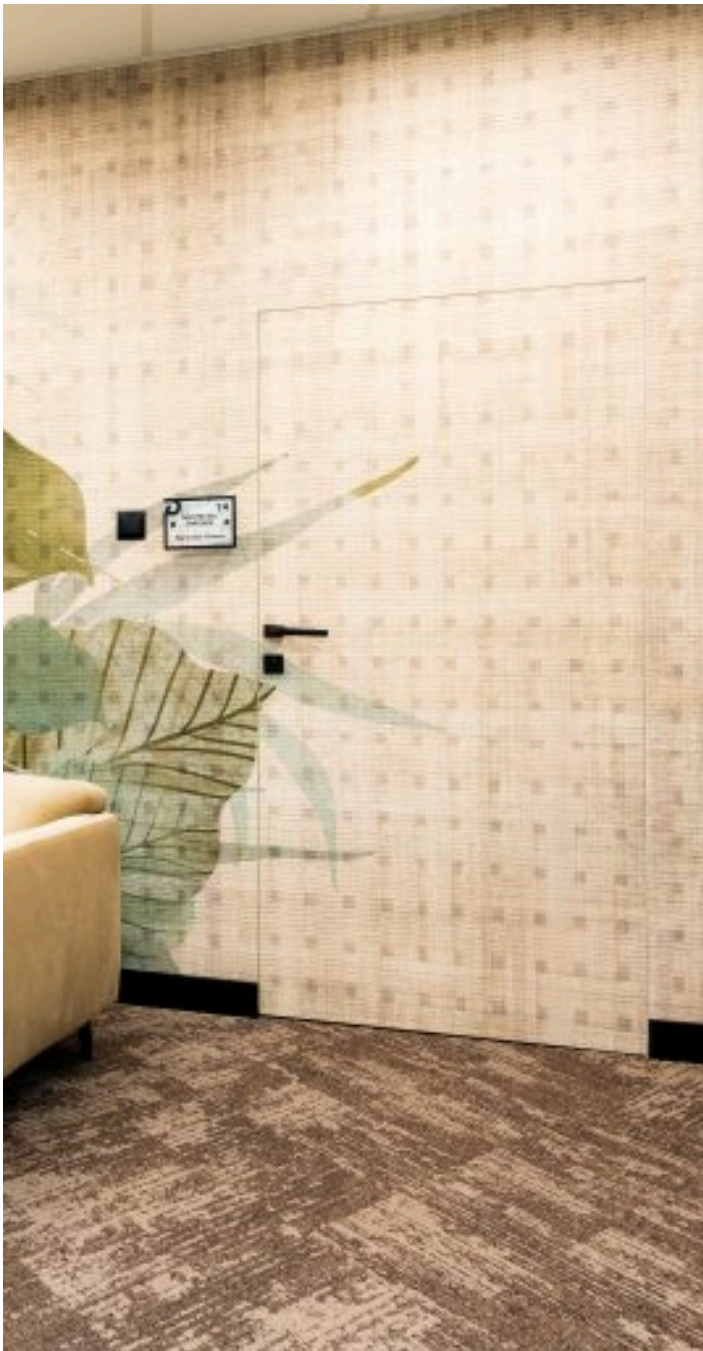

You can also cover the hidden doors with a semi-matt varnish from the RAL or NCS palette.

Finish
NATURE mocha oak

DI MODA sage

To be finished by yourself

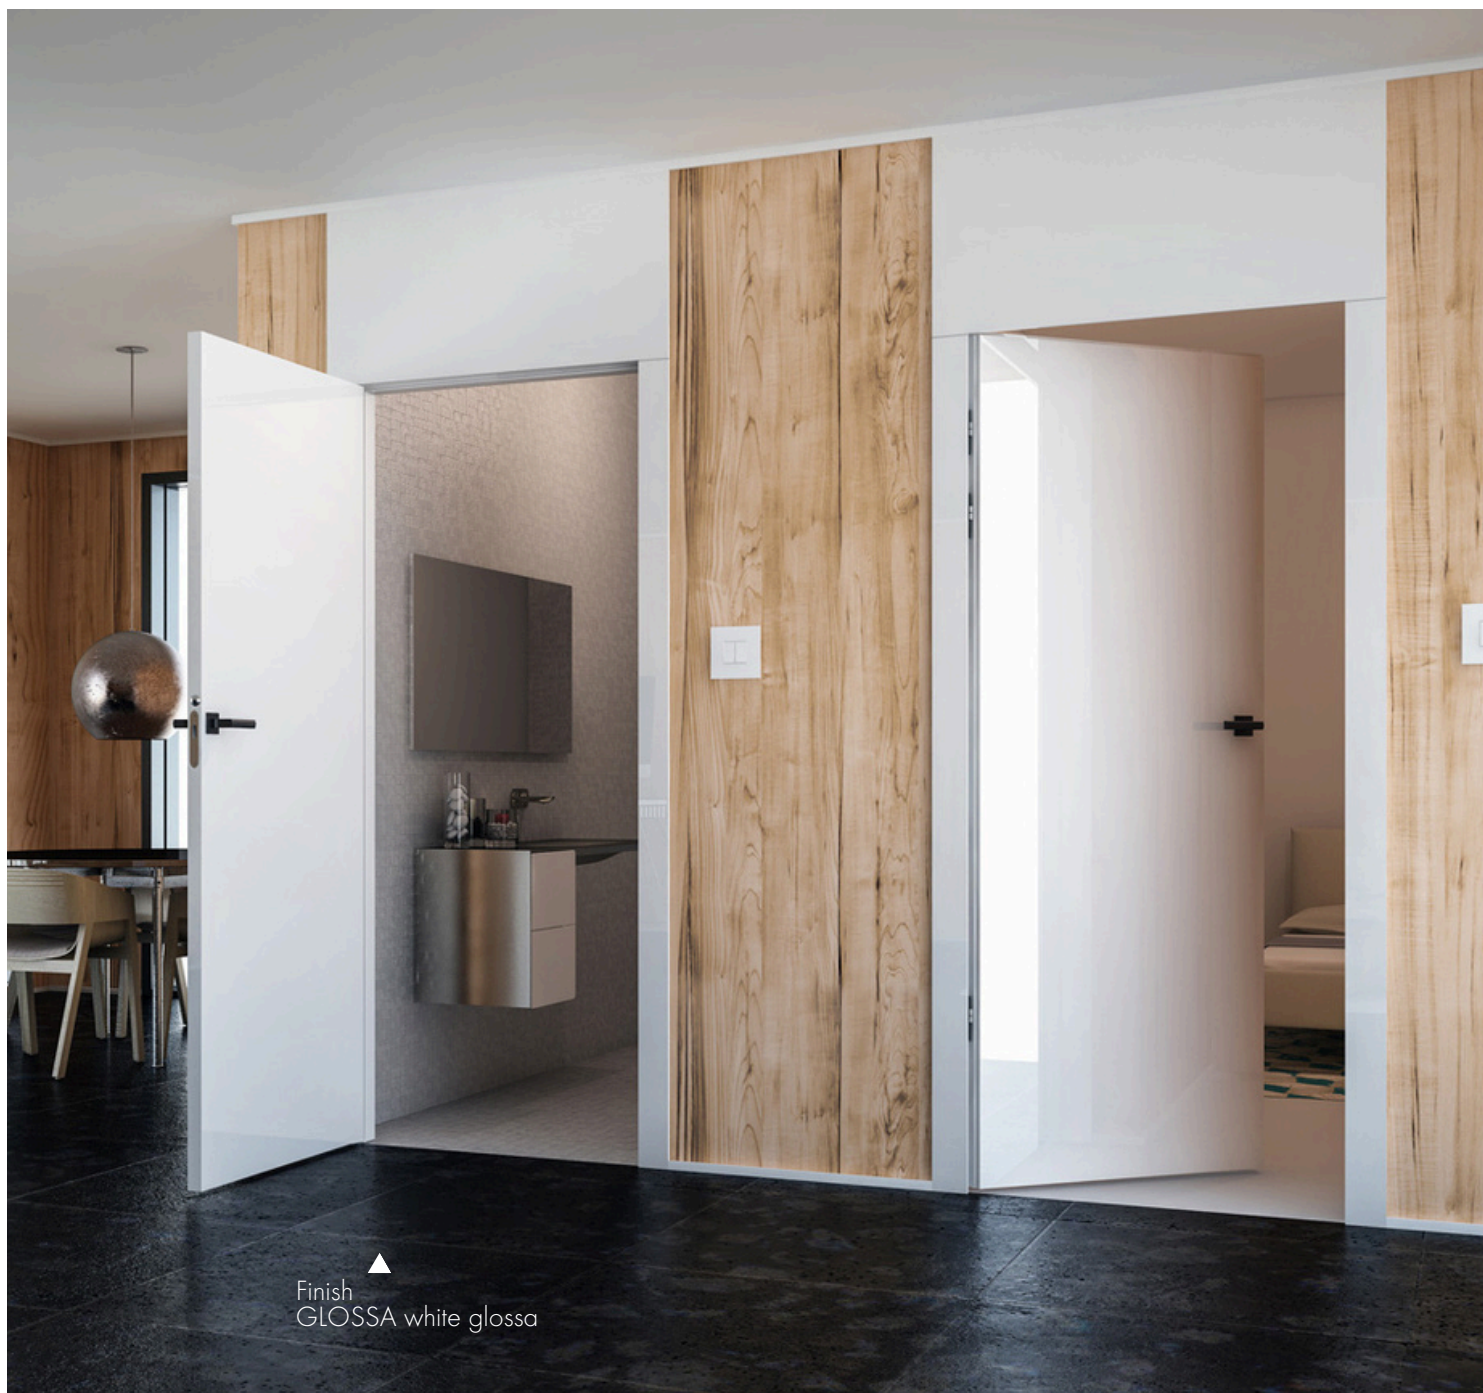

You can order concealed doors for finishing on your own. You can then cover them with the same colour or material as the walls (e.g. wallpaper or microcement).

Reverse rebate

Doors with a hidden frame are also available in a reverse rebate version. This allows them to open inward while remaining flush with the wall surface from the outside.

Aluminum wing edge

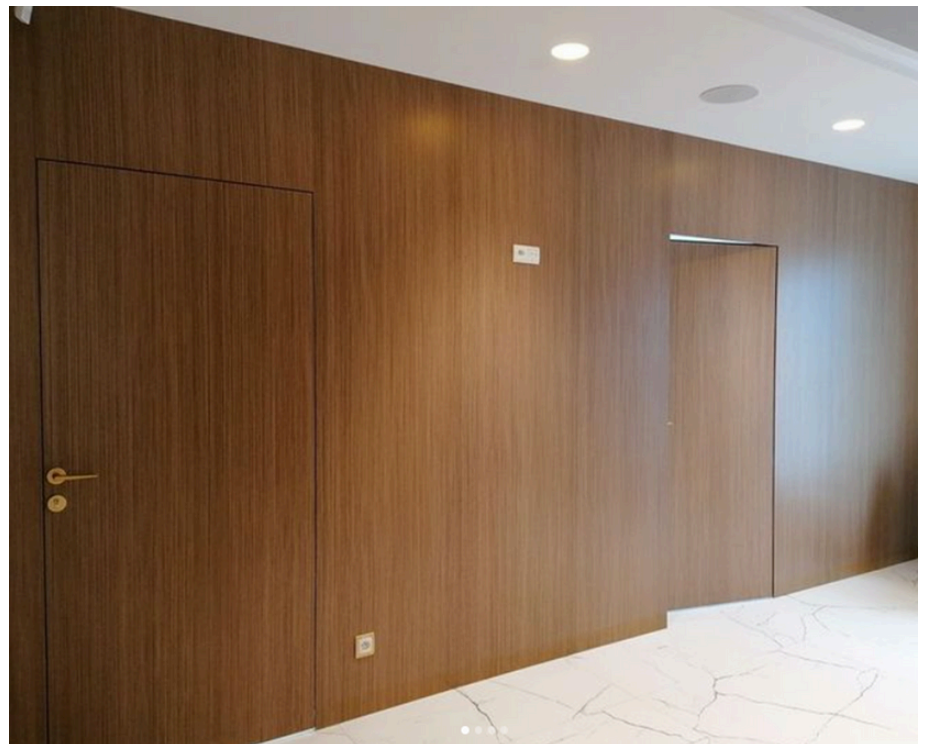

Optionally, you can finish the hidden door leaf with an aluminum profile painted in 1 of 5 RAL colors. The aluminum edge is available in door leaves up to 3 meters high.

Wall paneling

You can also hide doors within wall paneling, whether it's smooth or intricately grooved.

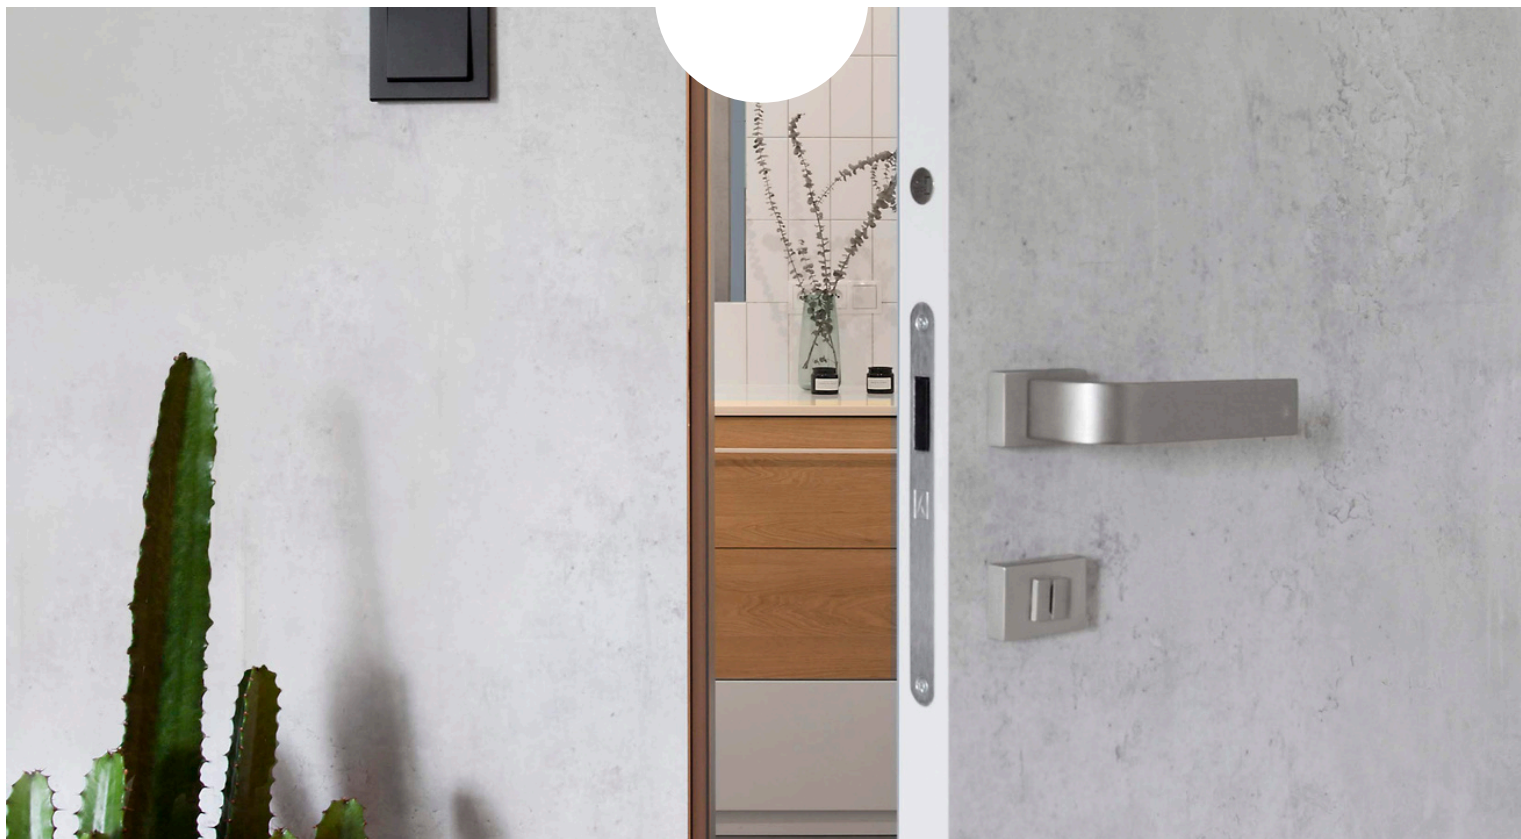

Remember

To achieve the best results, the installation of hidden doors should be planned during the construction or renovation preparation phase. It's essential to seamlessly integrate them into the wall structure.

Remember to start finishing work only after the doors have been installed. This approach ensures excellent results in a short amount of time.

About INTER DOOR

We are a Polish manufacturer of custom-made doors. Our offer includes wooden and glass interior doors, apartment entrance doors and fire doors.
